Feed Cost per Pound of Gain: The amount of money it cost in feed for the bull to gain 1 pound							
A lower number is desirable.							
Cost of Gain X 600 Pounds: The amount of money it cost in feed for this bull to gain 600 pounds							
(600 pounds is what you might expect a calf to gain from weaning to yearling or weaning to harvest.)							
A lower number is desirable.							
RADG (Residual Average Daily Gain): The Angus Association has an RADG EPD. This is defined as							
the difference between actual weight gain and the gain predicted on the basis of dry matter intake,							
maintenance of body weight, and fat cover. A positive number is desirable.							
Adj. F:G: Pounds of feed required for the bull to gain one pound. This number is adjusted to remove							
the age and size differences within the pen. A lower value is desired.
